DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Babbit (39,591) on 5/21/2007.

IN THE CLAIMS

Please amend the claims as follows:

- 31. (Cancelled)
- 32. (Cancelled)

Allowable Subject Matter

Claims 3, 5-12, 19, 21-28, 75-77 and 79-84 are allowed over the prior art of record as amended in the reply filed 5/16/2007 and as amended in this office action.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of a catheter for percutaneous delivery including an expandable member with a delivery cannula with a lumen with the cannula coupled to an exterior portion of the expandable body, the needle with a delivery cannula, and the needle assembly having a needle depth control mechanism with multiple stops for needle control and a needle control mechanism within the hub with a

first track and a second track, the first track having dimensions suitable to accommodate the first needle therein and the second track having dimensions suitable to accommodate the second needle therein, and wherein a proximal portion of each of the first needle and the second needle is associated with the hub according to a prescribed radial orientation.

The closest prior art of record is Green (6,217,554) and Epstein et al. (6,835,193), however these references do not disclose the device as claimed above.

Regarding claims 5, 8, 21, 24, 75 and 79, the closest prior art of record fails to teach among all the limitations the of the needle stop mechanism comprising the stop and sleeve mechanism as described above, Green and Epstein et al. merely disclose needle catheters that comprise simple one-directional stops located with at the tip or in the hub to control needle depth. Additionally, neither reference discloses the catheter hub with the needle tracks and prescribed needle orientation as claimed by Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
